AI / ML ENGINEER

Recent AI & DS graduate who ships working AI tools, not notebooks: Qwen fine-tuned for Java vulnerability detection (80% eval accuracy), CLIP inference in the browser, multi-account Kaggle GPU orchestrator. Former MLIR/LLVM compiler intern.

SKILLS

Languages: Python | TypeScript | JavaScript | SQL

AI / ML: PyTorch | HuggingFace Transformers | LoRA fine-tuning (Unsloth) | RAG | ChromaDB | Meilisearch | CLIP | Qwen VLM inference

Compilers: MLIR | LLVM | lit testing

Backend: FastAPI | Flask | SQLite | PostgreSQL | MySQL | Docker

Frontend: React | Next.js | Expo (React Native) | Tailwind CSS

Scraping / Automation: Selenium | Scrapy | yt-dlp | multiprocessing

Spoken languages: Tamil | Hindi | Telugu | English

EDUCATION

B.Tech Artificial Intelligence & Data Science, Dr. MGR Educational & Research Institute, Chennai, Tamil Nadu
GPA: 8.0/10.0

2026

WORK EXPERIENCE

Blubridge Technologies, Chennai, Tamil Nadu | AI Research Intern

07/2025 - 10/2025

- Implemented operator-fusion passes in MLIR for the team's custom tensor dialect, cutting kernel launch overhead by roughly 20% on benchmark workloads
- Added lowering patterns from the high-level dialect down to LLVM IR, including shape inference and bufferization for dynamic tensors
- Wrote 40+ lit tests covering pass correctness and IR round-trip stability, wired into the team's CI

PROJECTS

VulnChecker-Java (<https://github.com/barryallen16/VulnChecker-Java>)

End-to-end LLM fine-tuning for Java vulnerability detection: ~1GB of data curated through cleaning, synthetic augmentation and dedup; LoRA SFT via Unsloth; 80.39% accuracy on 102 eval cases, beating my own 14B run.

Kaggle Automation (<https://github.com/barryallen16/kaggle-automation>)

FastAPI control plane pooling multiple Kaggle accounts, sharding large jobs across them, monitoring 12-hour GPU sessions with Telegram alerts (~4,300 tested lines).

FitCheck (<https://github.com/barryallen16/fitcheck-website>)

Outfit recommender running FashionCLIP fully in-browser via transformers.js; VLM auto-labeling pipeline feeding a published HuggingFace dataset.

MoviesMod Scraper (<https://github.com/barryallen16/moviemod-scraper>)

Distributed Selenium scraper (16 stars) for a high-churn website: rotated-domain auto-resolution via redirect tracking, multiprocess workers with retry/backoff, MySQL dedup state, Docker Compose orchestration.

Memory (<https://github.com/barryallen16/Memory>)

Bookmarklet generator that autofills Google Forms: fuzzy question matching, ARIA radios and dropdowns handled, defeats React controlled-input value tracking.

AWARDS, ACCOLADES AND CERTIFICATIONS

2025 | 2nd prize, Bug Bounty CTF | Techwoods '25, Madras Christian College

2024 | 4th place, nuclear energy prediction hackathon | HackAtom, Russian Centre of Science and Culture
